

MAIN STREET RECONSTRUCTION

City of Littlefork, Minnesota

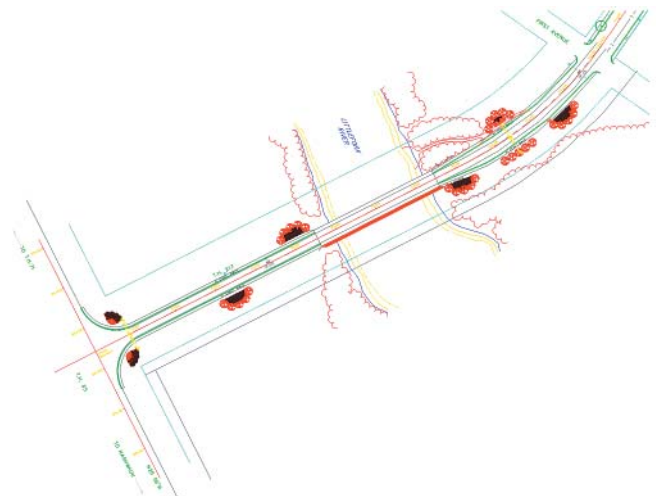

Community Needs

Trunk Highway 217 is the primary road connecting Littlefork with the rest of northern Minnesota. Beginning in the 1980s, this highway had significant drainage and grading problems for a ¾ mile stretch through Main Street in Littlefork. The City procured RLK to partner and coordinate city infrastructure and streetscape for MnDOT improvements on this state highway.

Maintaining Client Priority

Following an initial city funding request for these improvements, RLK staff worked consistently with five different MnDOT project managers over several years on bringing water and sewer replacements, as well as a streetscape design, into the MnDOT design.

Long-Term Results

The City of Littlefork appreciated how RLK staff provided a persistent advocacy for their community’s needs and eventually procured funding of local improvements for this trunk highway project. The City of Littlefork continues to utilize RLK for a range of engineering projects.
